Batemans Bay - Landscape Design Statement

The outdoor waiting area features comfortable seating surrounded by a garden with coastal and colourful plants. The outdoor area uses two types of exposed aggregate paving, arranged in smooth, natural shapes of sand and water inspired by a coastal landscape.

The open space of the hospital in the south has seating and a variety of coastal and colourful plants as well. Similar to the outdoor waiting area, it uses two different types of paving, creating an attractive and cohesive look.

The landscape consultant confirms that to the best of our knowledge, the landscape design complies to Greener Places Guide with regards to:

- Accessibility and connectivity
- Distribution
- Size and shape
- Quantity
- Quality
- Sense of place
- Biodiversity and local habitat
- Mental health and wellbeing

DESIGN PRINCIPLES

1

Landscape Concept Design Principles

Outdoors and Wellbeing

Gardens and access to fresh air, sunlight and natural light contribute to health and wellbeing. By prioritizing natural elements, we can focus on a beneficial relationship between the outdoor environment and its inhabitants.

Tranquil and Calm

Creating peaceful and relaxing outdoor spaces for people to compliment the function of the healthcare facility.

Coastal and Native

This design principle entails using the unique characteristics of the coastal environment to create a sense of connection in line with creating a captivating and immersive space.
